Subject: Data Analytics with R

Experiment No. 06

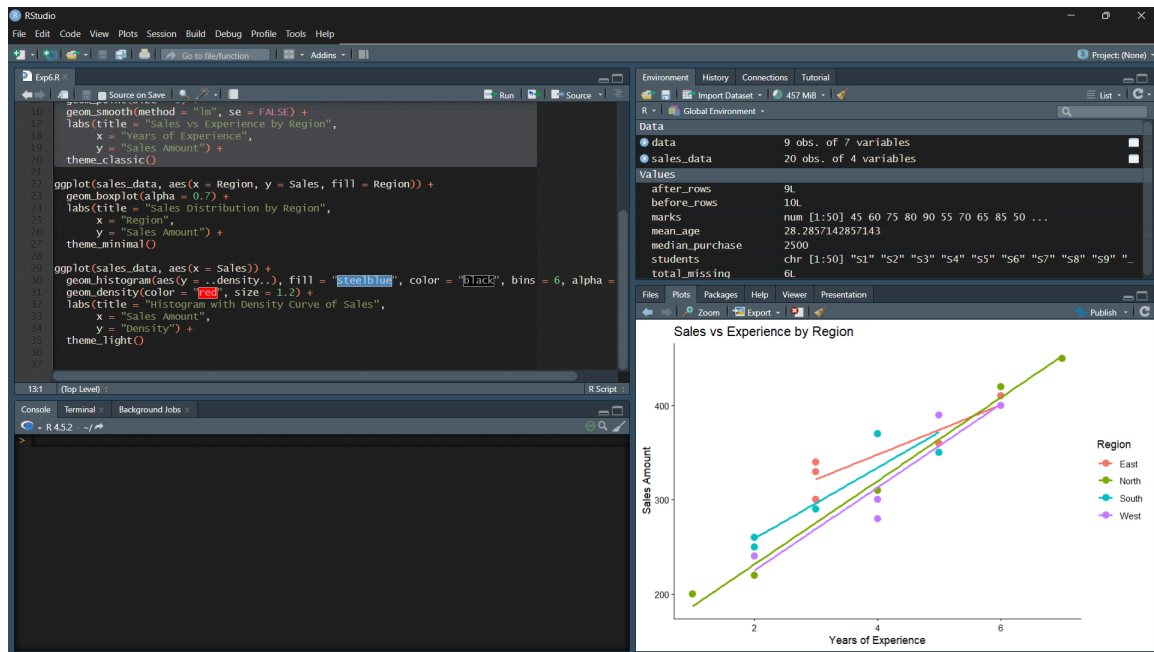

To implement layered plots using ggplot2 to create aesthetics and themes

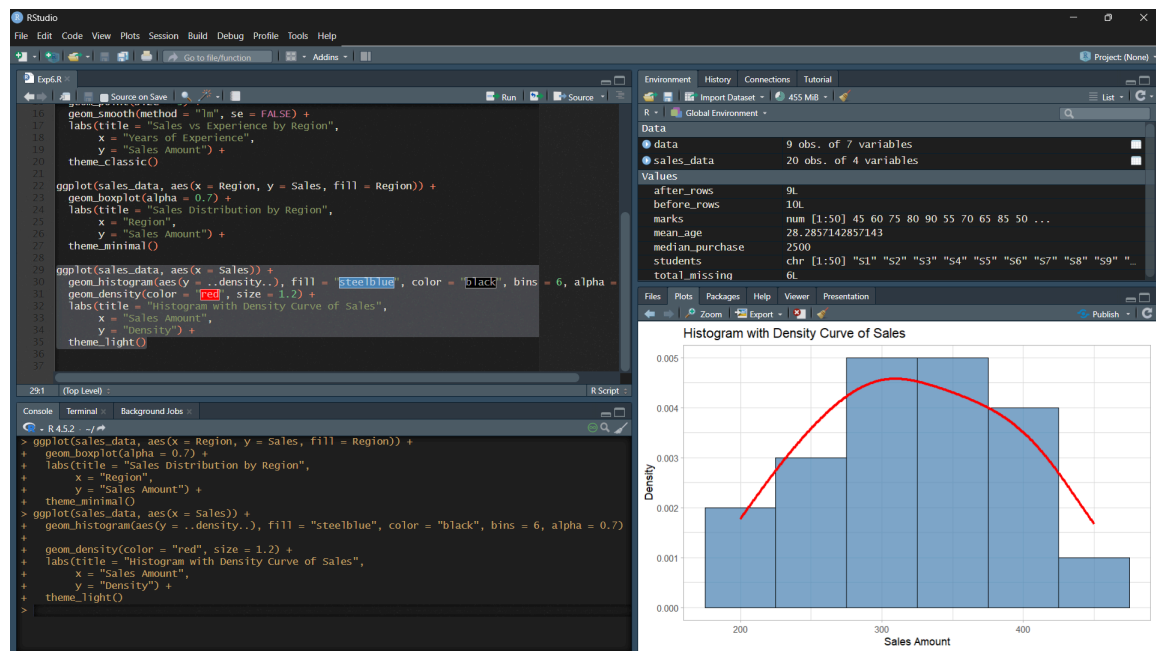

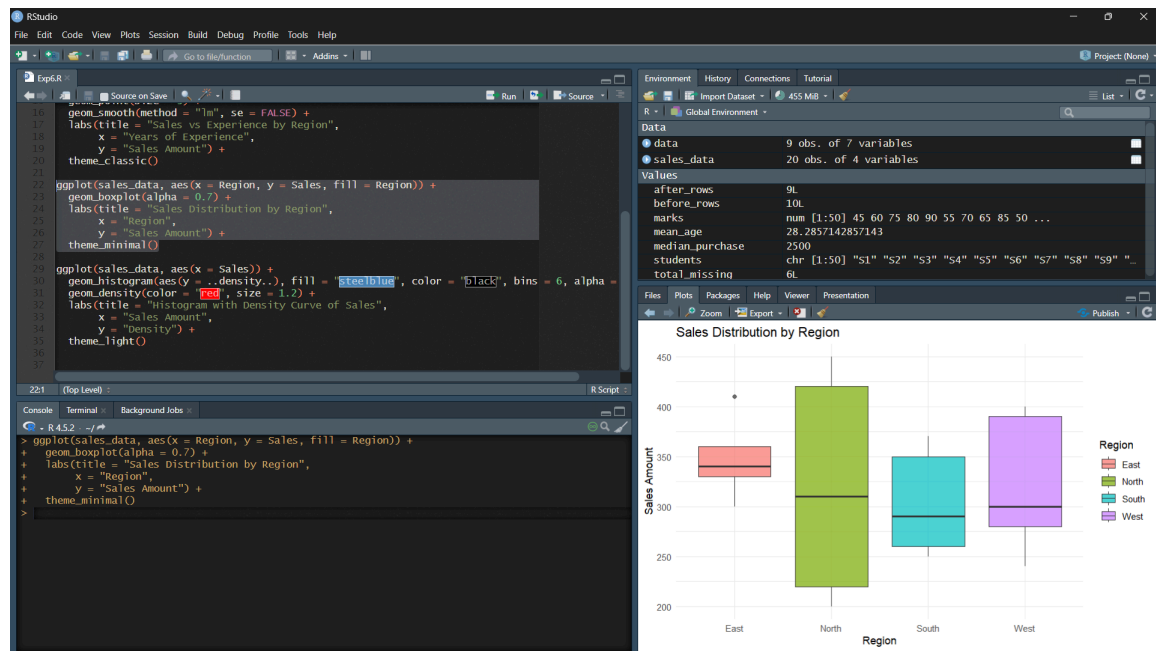

Title: To implement layered data visualization using ggplot with aesthetics and themes.

Aim:

To implement layered plots in R using the ggplot2 package and customize visualizations using aesthetics mappings and themes.

Code / Outputs:

Conclusion:

The experiment demonstrates the power of layered visualization using ggplot. By separating data, aesthetics and geometric layers, students can build flexible and customizable plots. The ability to apply themes enhances presentation quality, making ggplot2 suitable for research and industry analytics.
